Which is to say that before it was called Auto-Level, there was Curves. When you're ready to adjust an image's exposure levels, an amazing thing happens. The Curves tool adjusts the curves in the image's color. It's just perfect for image adjustments that

require corrections. Also, it's very precise and fixed, without relying on the subject's colors, so it's great for those images that you would want to control with their colors. There are no curves presets in the Curves tool. You have to create them yourself.

"Who has the best camera in the world? Does your mother? Maybe your kid. But it's the one that sees the most, the captures the most, and has the longest memories, right? Ever since I was five, and I first brought a camera to school, I wanted a great camera that would put everything else to shame, and back then, I knew that no camera had everything I wanted. You might as well buy that shiny, expensive new car, because if it doesn't make you happy, then it's not worth it. I always thought that 'good enough' could be better than good..." This is what I wrote about the runaway success of the first smartphone camera, the Nikon Coolpix S800. It just brought an entirely new dimension to photography about a couple of years ago. It set the benchmark... and broke all of it. But what Leica showed was that camera market was far from being saturated; the digital revolution was just beginning. Following my Nikon S800-captioned introductory example, here's another one that was captured on a Vivo X21N. I wanted to capture the flavour of the holiday season as well as the urge to see the fun to be had in the display window. Looking back now, this was all about the second coming of a holiday season that never was! The first photograph was shot on November 2011 using a Kodak EasyShare Z6000, the second, on January 2012 again with the Kodak EasyShare Z6000, and the third and last one using my Nikon D3100. The timing was wrong

and the weather was wrong, but I did it nevertheless. Why? Because the camera was great and the only thing I needed to do, was capture the moment as it happened.

SVG format allows designers to use vector images without compromising on quality, which is much more effective for designing websites and print applications, since graphics can be enlarged without quality loss.
